

Set Your Resource Browser to the Correct Drives in ActivInspire

If you take your laptop home and use ActivStudio or ActivInspire, it will lose its place on the network and won't be able to locate your shared resource. Here's how to fix that:

1. Open **ActivInspire**
2. Click **FILE | SETTINGS**
3. Click **PROFILE AND RESOURCES** in the left pane of the Settings window that pops up. Deselect the checkboxes next to the first 2 checkboxes ('Use Default My Resources Path' and 'Use Default Shared Resources Path'.)
4. Click the first ellipsis button ('My Resources') and select the plus sign next to **MY COMPUTER** | click the plus sign next to the H drive | then click **ACTIVSTUDIO**
5. Then click the second ellipsis ('Shared Resources') and select the plus sign next to **MY COMPUTER** | click the plus sign next to the **P DRIVE** | then click **INSPIRE**
6. Click **OK | DONE**
